Stocktaking

Keeping accurate stock on hand levels is an important part of any Point Of Sale Inventory system.

Faster and easier than paper stock count sheets, Mini Scan will add items that are in separate locations i.e. on the shelf, in the storeroom, on display, etc.

Stocktake data can be accumulated from multiple devices, and variance reports printed showing total stock counted.

Manufacturing

Different from Stocktaking, Mini Stock Adjust allows you to add or subtract a quantity of items. Ideal for factories, warehouses, or any business that creates products from individual parts.

As the raw material components are decremented, the quantity of finished product is incremented. Positive adjustments can also produce new item labels.

Label Printing

Labels can be printed in a variety of sizes to suit different products, as well as for shelf labels.

Printers using rolls of labels can print them one at a time, while Laser and Ink Jet printers can print A4 sheets of labels.

Price Checking

Verify that the price displayed on the Shelf Label is the same as the price in your computer stock file.
Eliminate under or over charging at the Point Of Sale and avoid costly fines!
Can also be used to check Quantity on Hand.

Mobile Sales with EFTPOS

Just like a mini cash register !

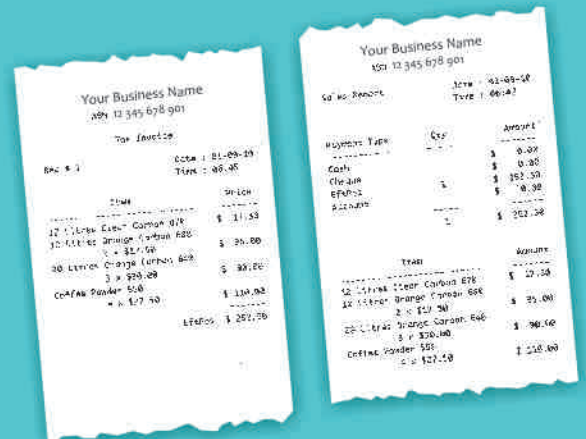

Ideal for delivery drivers, tradesmen, mobile sales people, and even stall holders at weekend markets.

Simply scan the barcode, enter a product code, or select items from a list.

Payment options include Cash, Cheque, Credit Cards, or Customer Account.

Receipts can be printed on a mobile printer worn on your belt.

At the end of the day, print a sales report showing the total takings as well as the total of each item sold.

sample of printed receipt and report

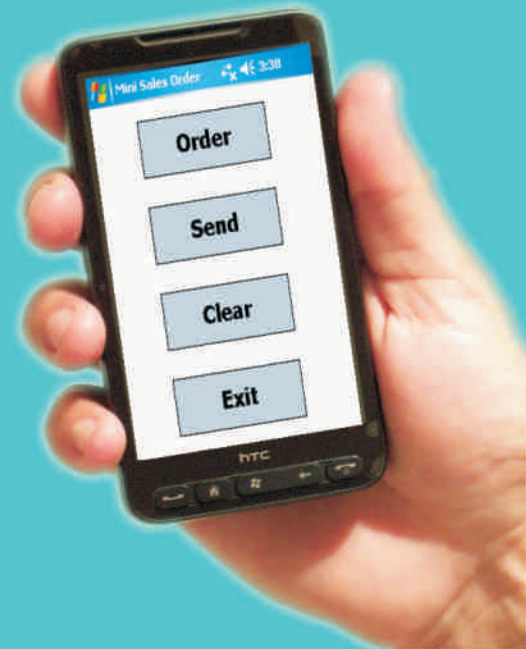

Sales Orders

Ideal for Sales Reps who take orders from customers, then send the order to their office for processing.

Select items from a list, by product code, or by scanning the barcode with a Bluetooth scanner.

You can even use your Smart Phone to email the order, saving time and improving customer service !

Purchase Orders

You no longer need to manually write orders out for suppliers. Use Mini Order Pro to select the item and enter the desired quantity, then print the order or email it to your supplier.

Goods Receiving

Receiving stock is just as quick - simply scan the barcode and confirm the quantity. This data can then be sent to your computer to update inventory levels.
